

## Purchasing of equipment containing F-gases

### Air to air heat pump

#### Record of the use of a certified installer

The refrigerant circuit of the air source heat pump contains fluorinated greenhouse gases, which is why the installation requires a refrigerant qualification awarded by the Finnish Safety and Chemicals Agency (Tukes). As a reseller, we must ensure that a qualified installer connects the refrigeration circuit.

You can find a qualified installer in your area in the [Tukes operator register](#).

Select a city from the list and click search.

#### Form information and submission

Fill out all the information in the form below and save the document as an email attachment.

Enter **the order number** you received from the Karkkainen.com online store in the subject field of the e-mail. Send the completed PDF file by e-mail to [pakkaamo@karkkainen.com](mailto:pakkaamo@karkkainen.com).

#### Delivery of the order

After we have received your email, the order is going to be processed and you can track the delivery of the cargo normally.

#### Karkkainen.com – Ordering information

Ecommerce order number	
The brand of the air pump	
Date of purchase	

#### Customer information

Name	
E-mail	
Phone number	

#### Installer information

A qualified installer or company who makes the cold circuit connections

Company, or installer	
Certification number*	
Type of qualification	At least E3 (below 3kg of refrigerants)
Phone number	
E-mail	

\* You can obtain the certificate number from an authorized refrigerant installer or company

By sending the completed form to the dealer, the buyer declares that he uses a qualified installer to operate the cold circuit and thus complies with Article 11 (5) of the EU F-Gas Regulation.
